GenerLink

Alberta has very unpredictable weather, which at times can cause power outages, which makes having access to backup power extremely important.

For more information or to Order a GenerLink, contact the office.

With a GenerLink installed, you never have to worry about another outage again. GenerLink is a product that makes connecting a generator easy and safe while providing homeowners the opportunity to run critical items in their homes during a power outage. With GenerLink, using your portable generator during a power outage is easy and safe! GenerLink eliminates the hassles of running multiple extension cords, or hiring an electrician to install a transfer switch.

The device detects when a generator is operating and automatically disconnects from the utility grid, eliminating dangerous back feed. It is a five-inch device that is easily installed behind a customer's electric meter by WRREA and requires no rewiring of the customer's electrical system.
